INTRODUCTION

Since 1988 The Somerset Wildlife Trust and the Somerset Environmental Records Centre have been using a County Notable Species system as a tool for general ecological recording, site evaluation, biodiversity mapping and reserve monitoring throughout the county. The system provides a means of filtering the enormous quantity of species records that are produced and concentrating recording effort on those species which are uncommon or rare, or which have some other ecological importance.

The Dictionary comprises a series of lists for the main floral and faunal groups. Each list is derived from the Red Data lists of nationally notable species, along with those species which have some degree of protection in national or international law - primarily through the Wildlife and Countryside Act (1981 amended 1988) and the European Union

Habitats Directive (1992) and Birds Directive. For the first time the Dictionary also includes Biodiversity Action Plan priority species. Using these sources in combination with data held at SERC and elsewhere, lists have been produced which contain those species that have importance in Somerset. For those groups where data is plentiful, it has also been possible to identify species that are not nationally notable, but which are uncommon in the county.

The inclusion of updated status information and the greatly increased volume of records available since the fourth edition have in some cases made the lists quite different from their predecessors. It is hoped that for all groups the lists now more accurately reflect the vulnerable and endangered species of Somerset. In general the same objective criteria for selection developed for the last edition have been used wherever possible.

Previous editions of the Dictionary have included a proportion of species that have not been recorded in the county, but which it was deemed likely would occur. In this fifth edition I have attempted to avoid this practice as, in most cases those recorders who are capable of identifying extreme rarities and new county records will record them whether or not they are notables.

Each list includes the scientific name of each species, along with common names where available, the national and international status and in some cases a fourth column provides information about the reasons for selection or additional ecological details. Where species are commonly recorded by their common names (such as Birds and Butterflies) the lists have been ordered alphabetically by common name, other lists are ordered by scientific name.

In addition to the lists in the fourth edition Dictionary, there have been added a list of notable Stoneworts (Charophytes) and another of notable Fungi.

Additional lists have also been included as appendices, of species which it is felt deserve recording, but which do not satisfy the criteria for notable status. These species fall into four categories:

- Introduced, invasive or "conservation problem" species,
- Critical species - e.g. food plants for rare invertebrates,
- Indicators of rare or important habitats and,
- Nationally notable species which are common in Somerset

These additions notwithstanding, I will not make the claim of exhaustivity, which was made for the 1995 Dictionary. There have been omissions, in particular marine taxa are not specifically included. At present technical restrictions have made marine recording difficult for SERC. It is hoped however that such omissions will be corrected in the near future as data becomes available.

SERC and the author would like to thank all those people who freely gave their time and expertise to enable the production of these lists. In particular thanks go to:

Annex II - Species protected under Annex II of the EU habitats directive (1992)

None - Species with none of the above designations.

Key to Codes

R - 'Rare' species recorded in 5% of tetrads or less in Somerset (48 tetrads or less)

U - 'Uncommon' species recorded in 5-20% of tetrads in Somerset (49-195 tetrads).

Species falling within this range are only selected as notables if they are:

a) Constant and preferential species for NVC communities which SERC regards as being of County Wildlife Site importance

A - Constant and preferential species from NVC calcifugous (acid) grassland communities

MG - Constant and preferential species from NVC mesotrophic (neutral) grassland communities

CG - Constant and preferential species from NVC calcicolous (calcareous) grassland communities

M - Constant and preferential species from NVC mire communities

H - Constant and preferential species from NVC heathland communities

Aq - Constant and preferential species from NVC aquatic communities

MC - Constant and preferential species from NVC maritime cliff communities

SD - Constant and preferential species from NVC sand dune communities

S - Constant and preferential species from NVC swamp communities

b) Species regarded by English Nature as being plants which are faithful to ancient woodland sites.

W - English Nature ancient woodland vascular plants

c) VEGAN indicators (grassland habitats)

VA - VEGAN acidic indicators

VN - VEGAN neutral indicators

VC - VEGAN calcareous indicators

d) Twinspan indicators (wetland/aquatic habitats)

T - Twinspan indicator species

e) Species which are adjudged to have declined rapidly at the local or national scale.

D - Species which are adjudged to have declined in recent years

f) Species which are considered by the DETR as indicators of important hedgerows

Hg - Important Hedgerow species

- CE - Critically Endangered
- EN - Endangered
- VU - Vulnerable
- DD - Data Deficient

Old UK Red Data List categories:

- 2 (Vulnerable.) Species likely to become endangered in the near future if the causal agents of their decline are not removed or reduced.
- 3 (Rare.) Species with small populations or few sites which are not at present threatened but may become at risk without adequate protection.

European Red Data List Categories:

- A Widespread losses, rapidly declining populations, many national extinctions, high-level concern expressed.
- B Widespread losses, evidence of steady decline, some national extinctions, medium-level concern.
- C Widespread, but scattered, populations, fewer extinctions, lower-level concern.
- D Local losses, some extinctions but mainly at edge of geographical range.

Key to Statuses

IUCN threat categories (Threatened)

- EX - Species believed extinct
- CR - Critically Endangered
- EN - Endangered
- VU - Vulnerable

IUCN threat categories (Lower Risk)

- nt - near threatened
- ns - nationally scarce

NOTE: This notable list was prepared using a list of Threatened and Lower Risk species supplied by JNCC. The latter list is described as being provisional. There is as yet no published Red Data Book for this group. The national status shown is therefore provisional in all cases.

Other categories

- LP - Legally protected by Wildlife and Countryside Act (1981)
- P - Biodiversity action plan species
- None - Species with none of the above designations.

Key to Codes

RIEC - Species used to calculate the Revised Index of Ecological Continuity

The above list was produced using a checklist kindly supplied by Prof. Francis Rose from a lichen atlas of the county which is as yet unpublished. The remaining items in the Codes column reflect Prof Rose's comments on the status of his records.

- r - species record reliably confirmed
- u - species believed to be present but record unreliable or unconfirmed at present
- a - species not recorded in the modern county of Somerset (records from Bath and North East Somerset)
- ex - species believed extinct

BIRDS

KEY to statuses:

Red List Criteria

- BD >=50% decline in UK breeding population or range over the previous 25 years
HD historical population decline in the UK between 1800-1995
SPEC1 Species of global conservation concern

Amber List Criteria

- BDM moderate decline (25-49%) in UK breeding population or range over the previous 25 years
BR five year mean of 0.2-300 breeding pairs in the UK
BI >=20% of the European population in the UK
WI >=20% of the north-west European (wildfowl), East Atlantic Flyway (waders) or European (others) non-breeding populations in the UK
BL >=50% of the UK breeding population can be found in 10 or fewer sites, but not BR
WL >=50% of the UK non-breeding population can be found in 10 or fewer sites
SPEC2/3 species with an unfavourable conservation status in Europe

Other categories

- LP Legally protected by Wildlife and Countryside Act (1981)
P Biodiversity Action Plan Priority species
Annex I Species protected under Annex I of the EU Birds directive

Key To Codes

- A Notable sightings, this category includes birds with low national populations (less than 10,000 individuals) at any time of year. A sighting of a bird in this category at any time of year constitutes a notable record
- B Breeding notable, this category includes species which are uncommon breeders at a national scale and which breed or have bred in Somerset or the South-west. For a record to be notable a bird must be showing some evidence of breeding
- C Wintering notable, this category includes species which are uncommon winterers or which winter in internationally important numbers, a sighting of this bird in autumn or winter constitutes a notable record, providing it is not simply flying over a site on its migratory route.
- D Declining breeder, this category includes species which breed in too large a number to be selected for category B, but which have declined in breeding numbers. For a sighting to be a notable record, birds must be exhibiting some evidence of breeding.

Key to Statuses

RDB - Red Data Book (recorded in less than 15 10 km squares nationally)

Other categories

LP - Legally protected by Wildlife and Countryside Act (1981/88)

P - Biodiversity action plan species

Annex II - Species protected under Annex II of the EU habitats directive (1992)

APPENDIX A - CONSERVATION PROBLEM SPECIES

The following lists include species which do not satisfy the strict criteria for inclusion as county notables, but which it is felt would benefit from additional recording effort. Species have been added on a purely subjective basis and it is hoped that the lists will be expanded in the future. All records of species on these lists will be entered into the SERC database.

Key to statuses

- ns - nationally scarce
- LP - Legally protected by Wildlife and Countryside Act (1981/88)

Key to codes

- I - Introduced or invasive species which may be a 'conservation problem'
- H - Species indicative of rare or important habitats
- N - Species which are nationally notable but too common in Somerset to be included in preceding lists
- C - Critical species, i.e. food plants for notable invertebrates
